Customer Review Score Trend

Avg Review Score - Delivered by Month-Year (Jan 2017 – Aug 2018)

Customer Satisfaction by Delivery Lateness

Avg Review Score - Delivered by Days Late Bucket

Key Finding:

Customer satisfaction drops sharply once a delivery is late — **falling 16% in the first 3 days (4.29 → 3.59)**, followed by **another 40% decline in days 4-6 (3.59 → 2.17)** — the steepest incremental decline — before leveling off around 1.73 for deliveries 7+ days late. This suggests the highest-leverage window for intervention is the 3-6 day range, not the earliest signs of lateness

Monthly average delivery time and review score are strongly inversely associated (**r = -0.89**), indicating that months with longer delivery times consistently experienced lower customer satisfaction.

by Customer State

Carrier Transit Variability - RJ vs. SP

Key Finding:

São Paulo and Rio de Janeiro account for the majority (**51.8%**) of the marketplace's late orders — but disproportionately: **RJ contributes 21.3% of late orders on just 12.8% of order volume**, while **SP's 30.5% late-order share sits well below its 42.0% volume share**.

RJ's problem isn't speed — its carrier-transit inconsistency (**10.7-day std. dev.**) is **nearly double São Paulo's (5.7)**, despite similar infrastructure. SP handles roughly **3× RJ's volume** while maintaining the marketplace's most reliable carrier performance.

RJ's variance spiked in **Feb–Mar 2018**, matching **the dataset's lowest review-score months** — suggesting carrier reliability, rather than delivery speed, may be the stronger improvement opportunity.

Total	52.7%	3.35		3204	R\$ 354,436.09

Key Finding:

10.6% of sellers fall below 80% SLA compliance — and these sellers average a review score of **3.35** versus **4.19** for compliant sellers, a **0.84-point (20.0%)** gap associated with delivery reliability.
